Transmission Line MIM Capacitor
(Metal-Insulator-Metal)

BENEFITS
• HFSS Design Unique for every device
• Gold Wirebondable
• Copper Conductor Design for improved Circuit Conductivity
• Designs Optimized for RF/Performance
• ROHS Compliant

DESCRIPTION
AVX Thin Film Technologies is pleased to introduce a novel MIM (Metal-Insulator-Metal) capacitor using a transmission line wire bond pad structure with backside ground.

The TL MIM can be supplied on quartz, alumina, glass and other substrates to minimize losses. Copper traces are used for optimal conductivity. Front and backside gold metalization make this device suitable epoxy, gold wire bond/ribbon bond attachments.

APPLICATIONS
• DC Blocking at UHF
• High Frequency Link
• RF Microwave applications

SUBSTRATE MATERIALS
- Alumina (Al₂O₃)
- Quartz

MECHANICAL DIMENSIONS
Based on Transmission Line Design Request

CAPACITOR MATERIALS

*Capable Capacitance Value Ranging From: 0.3-50 (pF)
Most Common Capacitance Values Requested are 1, 5, and 15 (pF)

### HOW TO ORDER

**MV**

Series Code: MV = TL MIM

- **MV** Series Code
- **04** Substrate Length in tens of mils
- **02** Substrate Width in tens of mils
- **C** Working Voltage C = 100 WVDC
- **A** Standard Impedance A = 50Ω X = Other Contact Factory
- **150** Capacitance code in pF
- **M** Capacitance Tolerance M = ± 20%
- **A** Substrate A = Alumina Q = Quartz G = Glass X = Other
- **A** Substrate Thickness (mils) A = 5 mils B = 10 mils C = 15 mils
- **W** Packaging W = anti-static waffle pack T = tested, undiced D = Tested and diced on tape
